

An introduction to

BACKBONE.JS

<http://backbonejs.org>

# What you'll need

optional

DOM manipulation  
and stuff

required

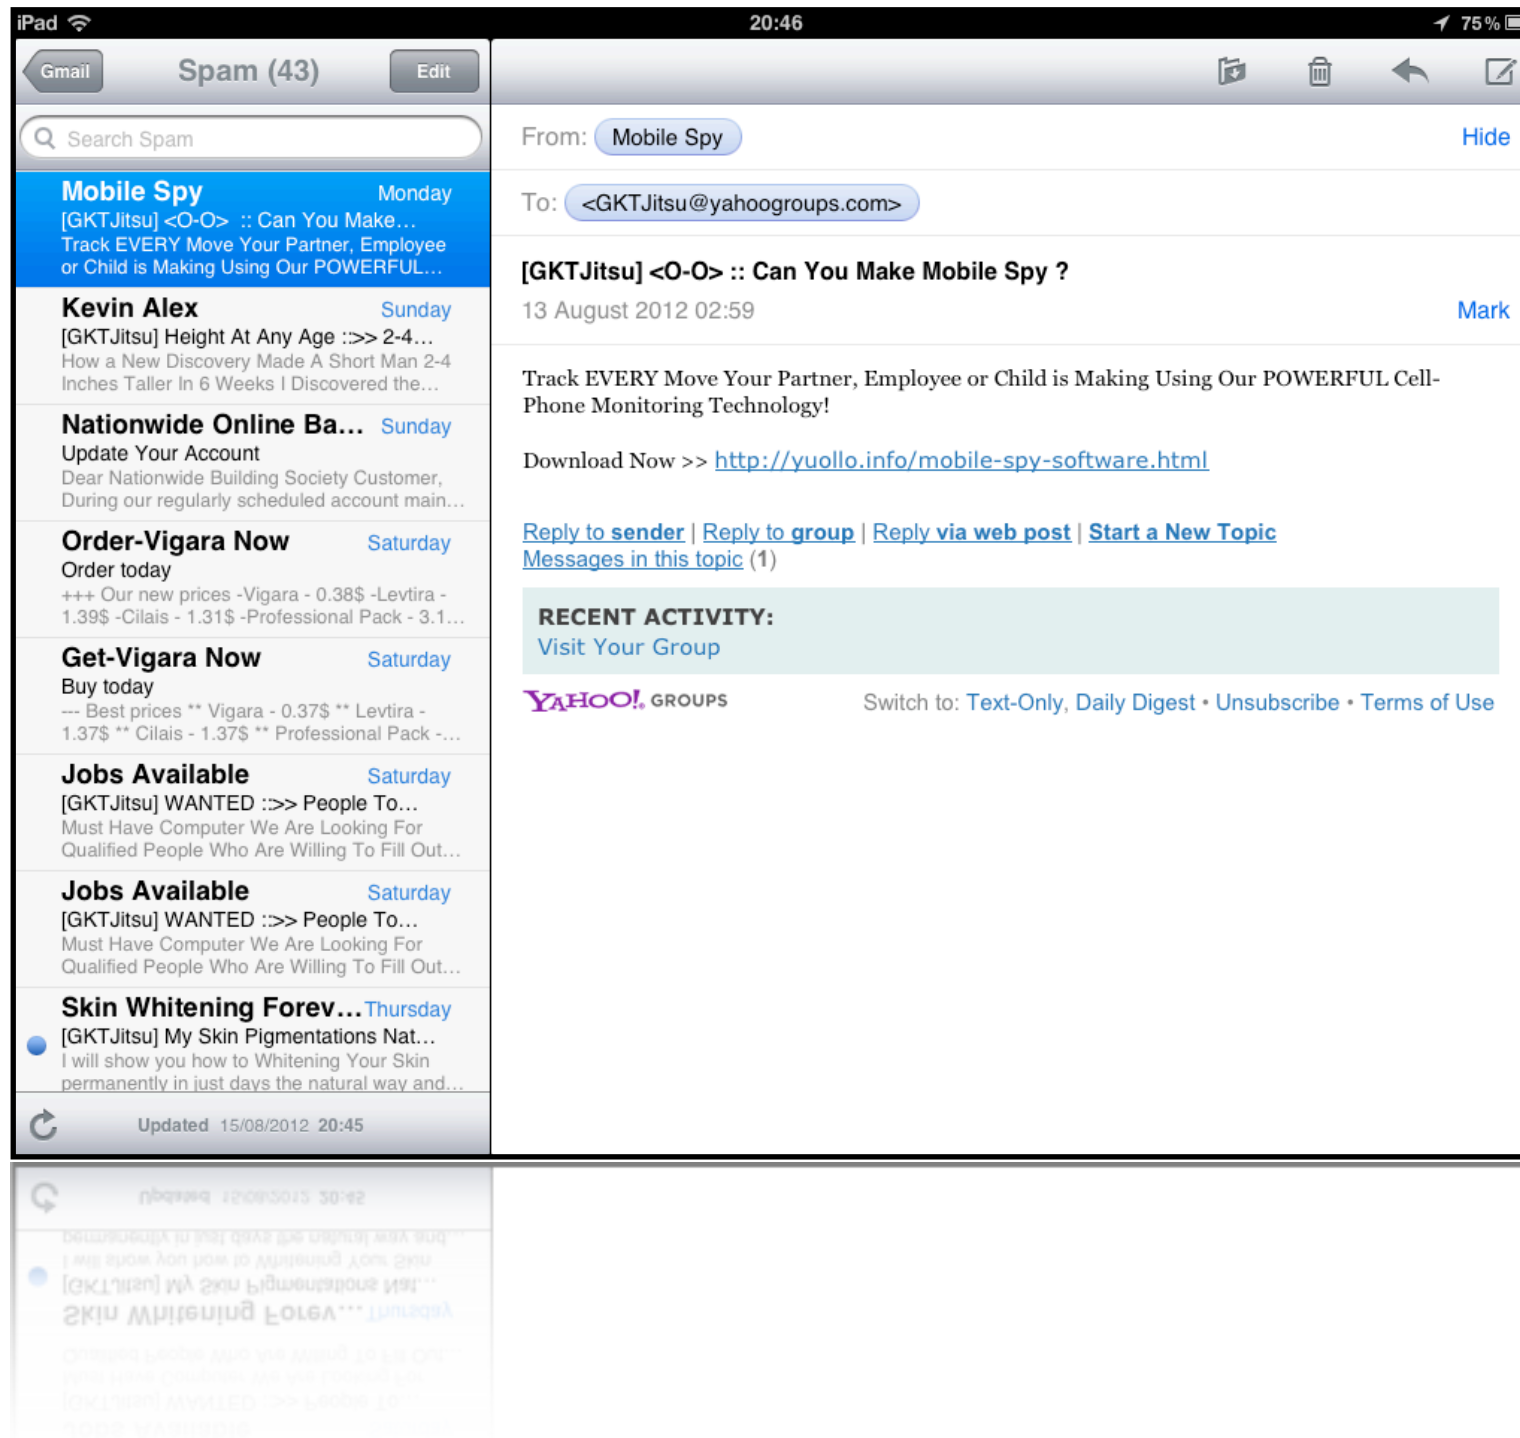

Functional stuff like  
**map**, **select**, **filter** etc.

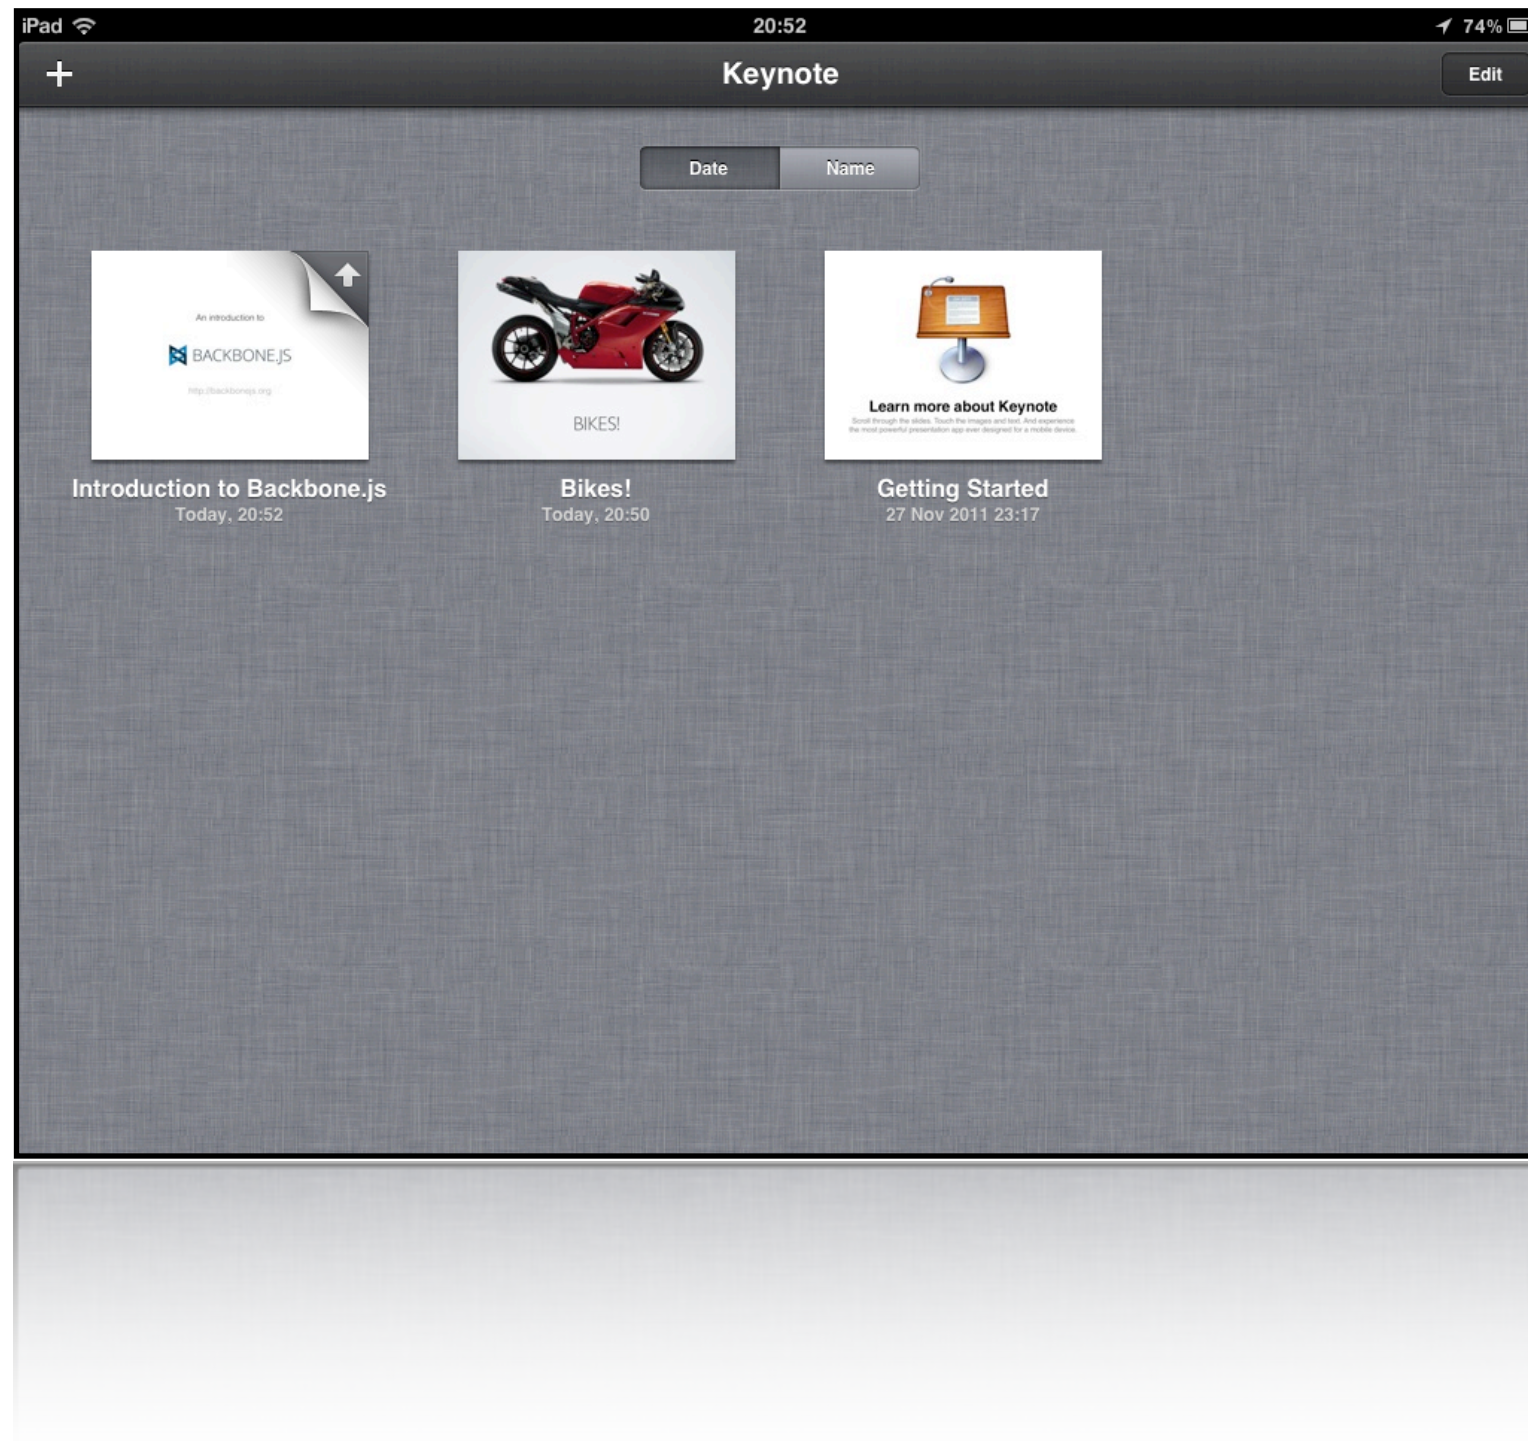

BACKBONE.JS

# What might you use it for?

Messages like emails

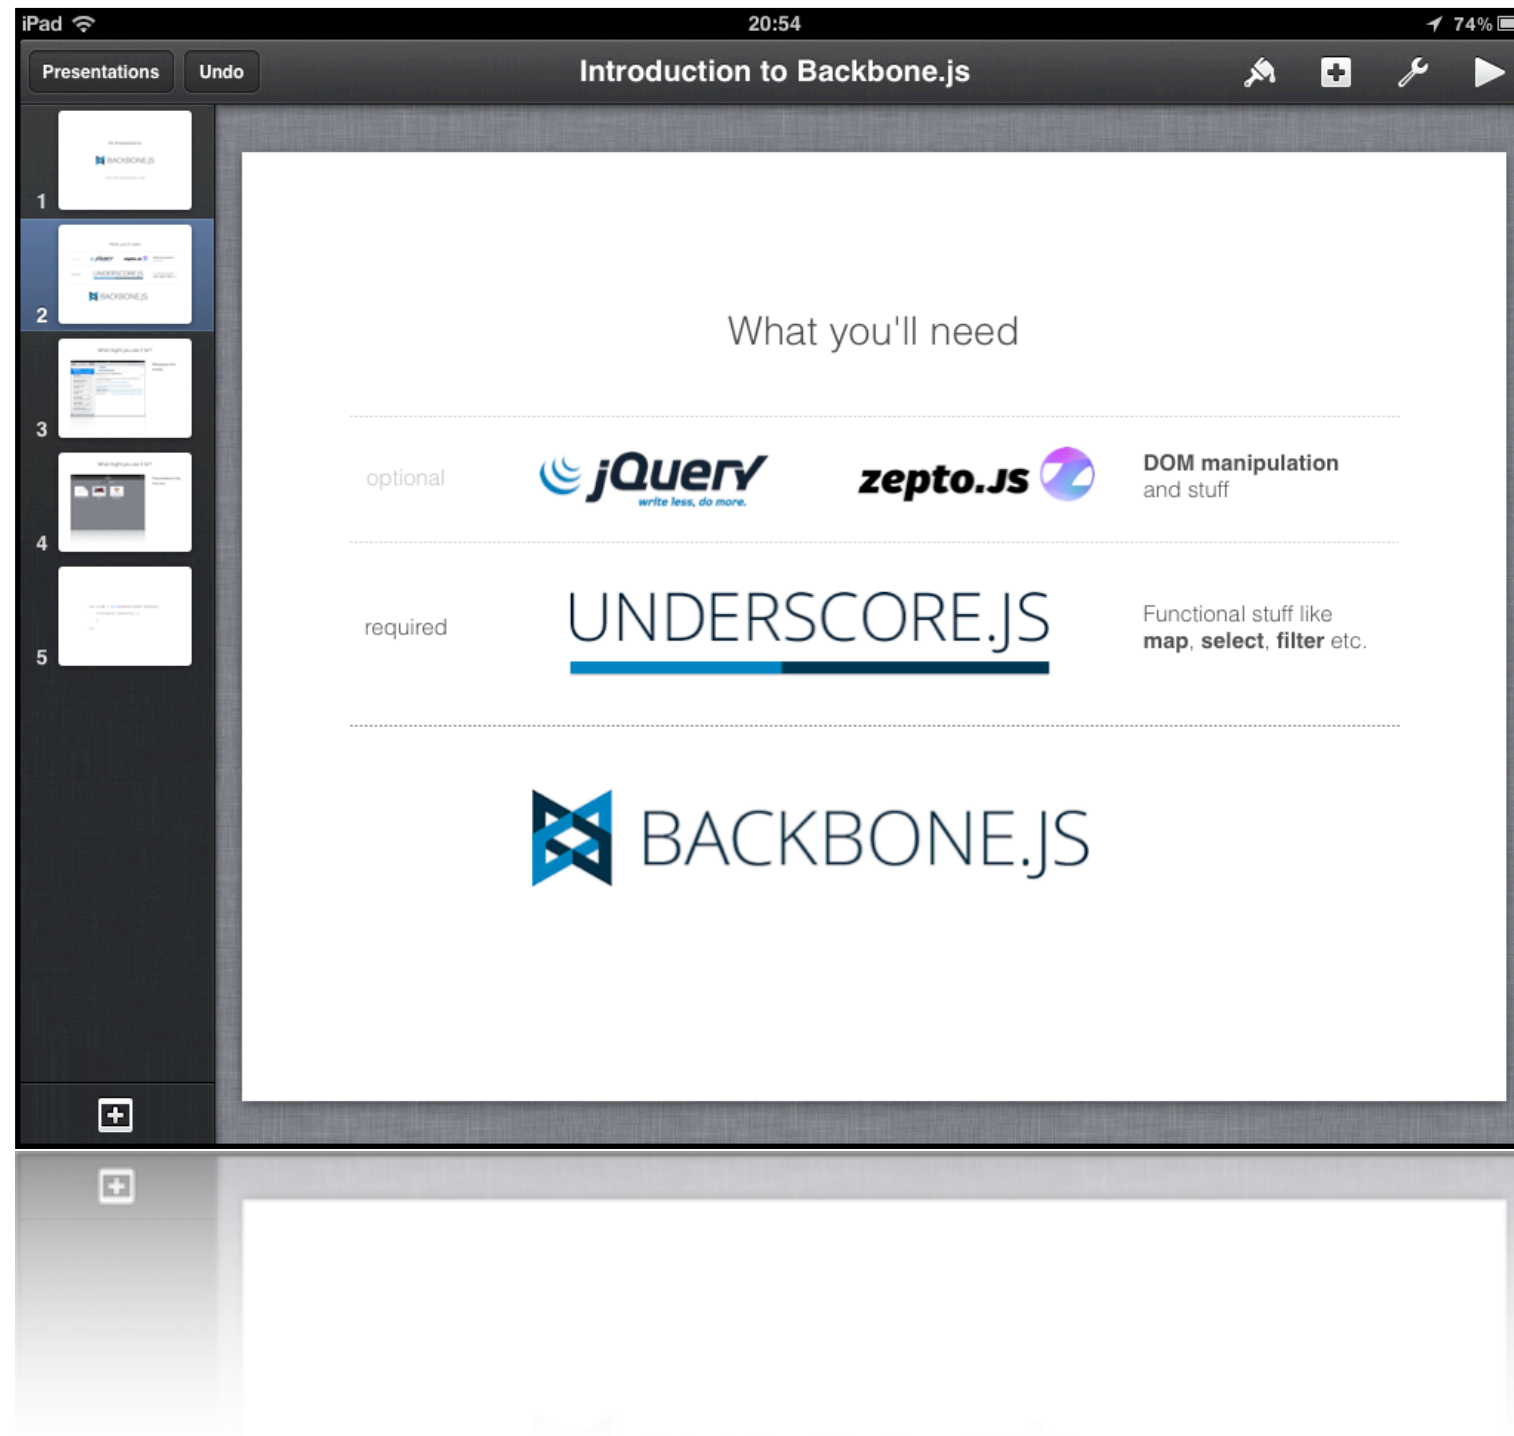

# What might you use it for?

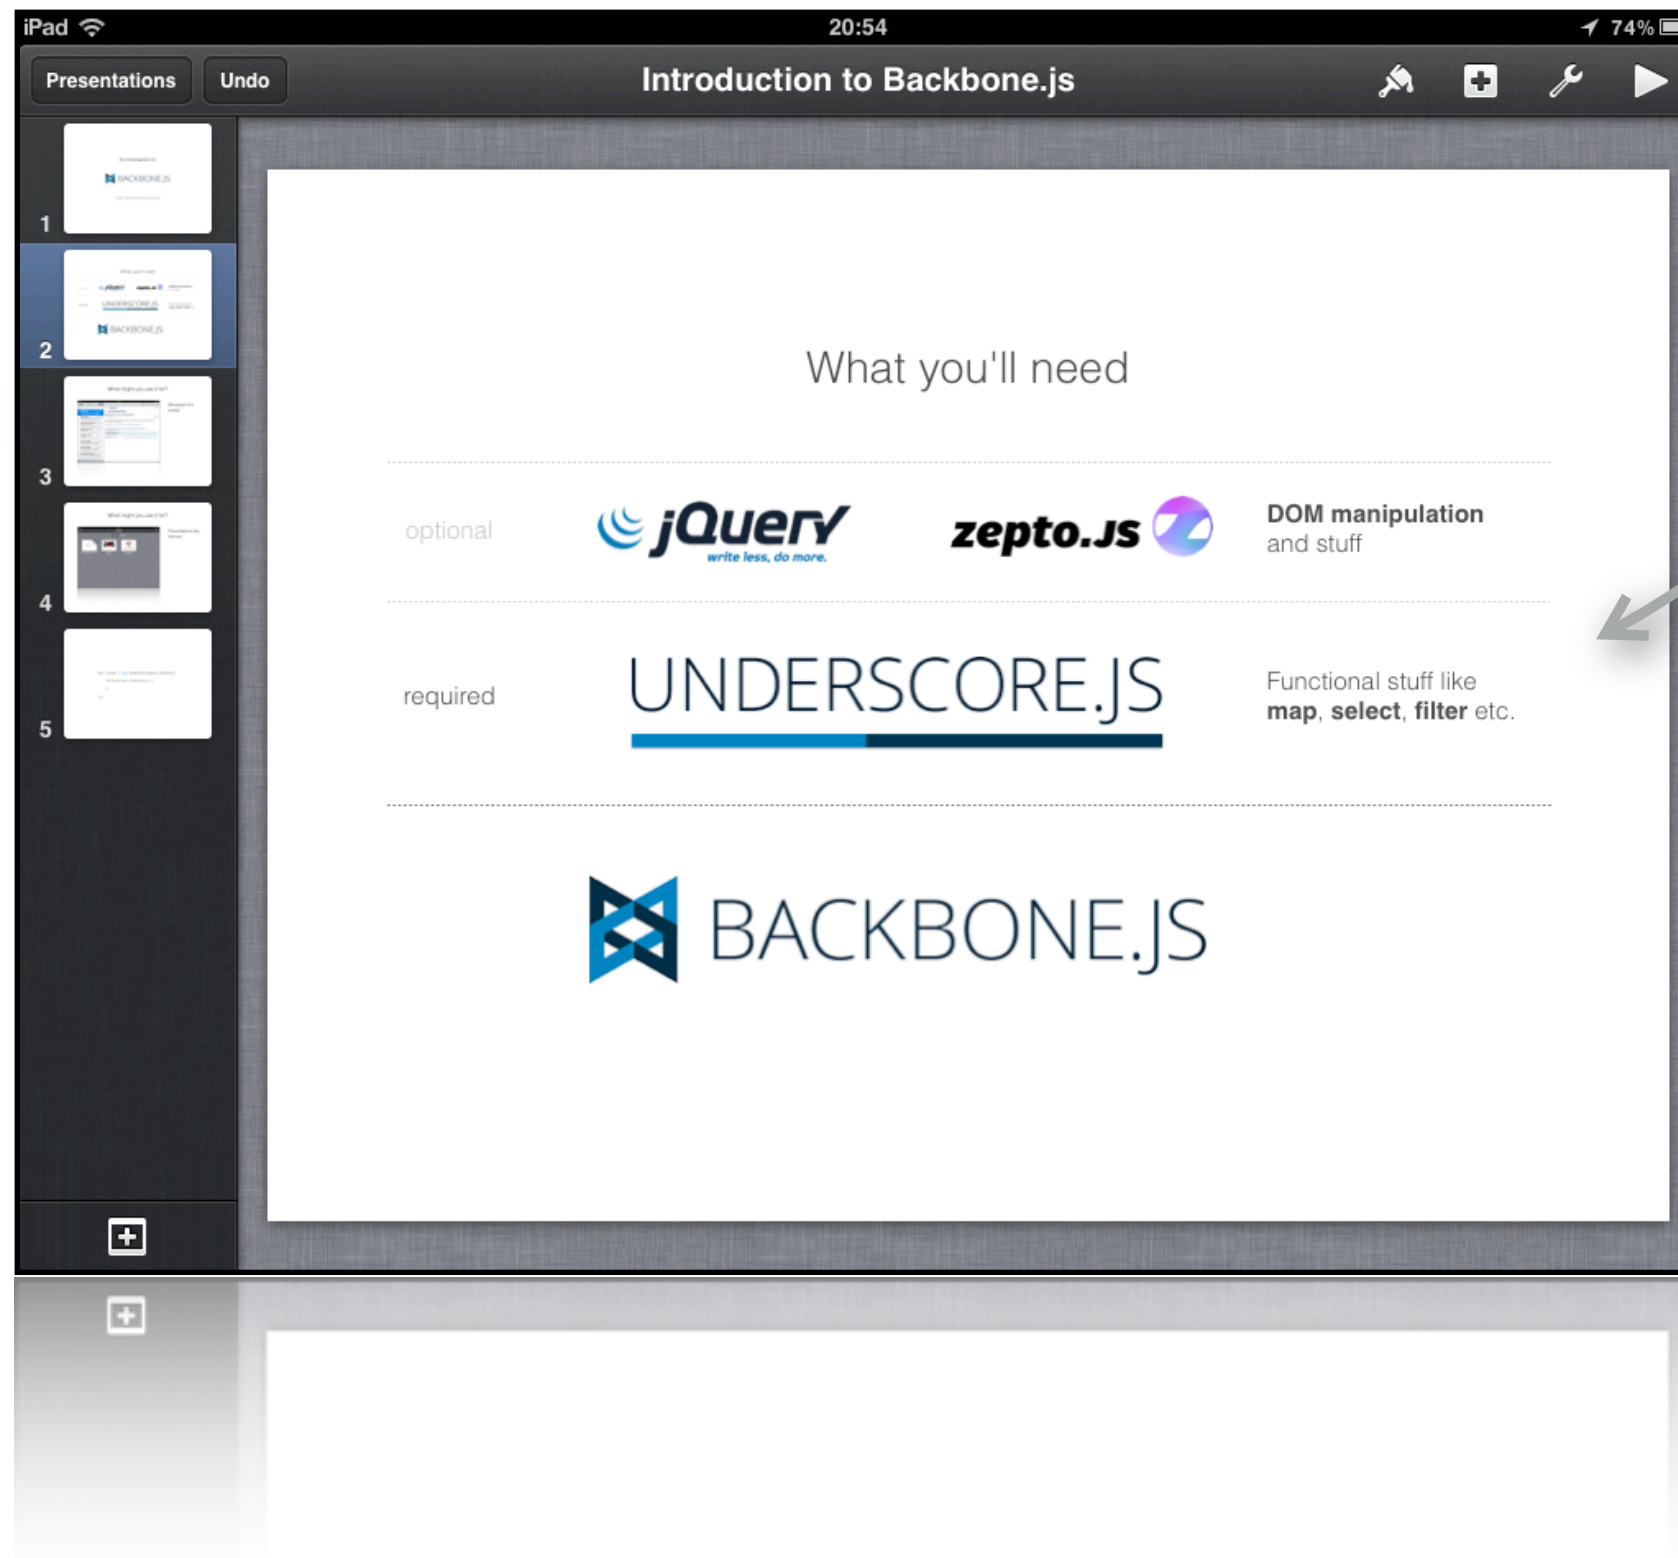

Presentations like  
this one

# What might you use it for?

Presentations like this one

All the slides

A slide

A slide

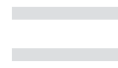

A model

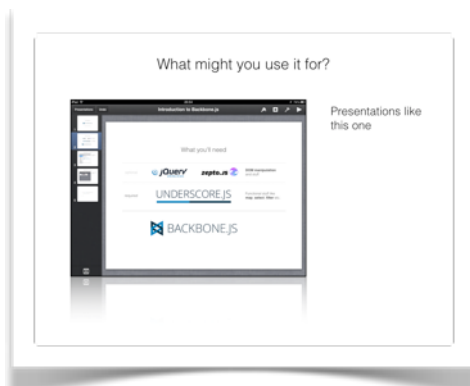

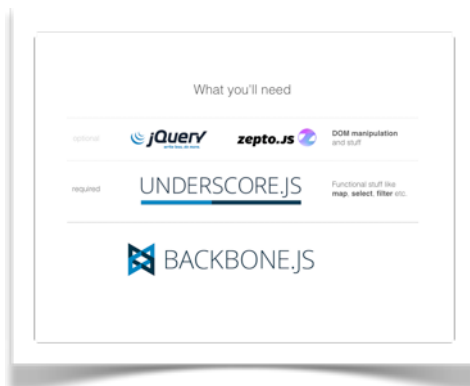

```
var slide = new Backbone.Model.extend({  
  initialize: function() {  
  }  
});
```

# Many slides

# A collection

```
var slides = new Backbone.Collection.extend({  
  model: slide,  
  initialize: function() {  
  }  
});
```

# Displaying the slides

A slide view

```
var slideView = new Backbone.View.extend({  
  initialize: function() {  
  },  
  render: function() {  
  }  
});
```

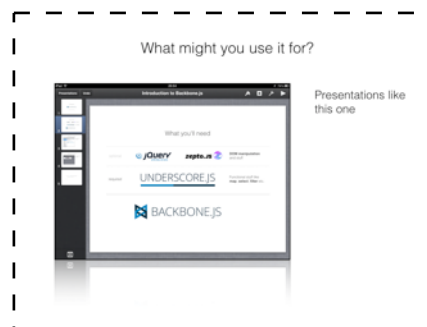

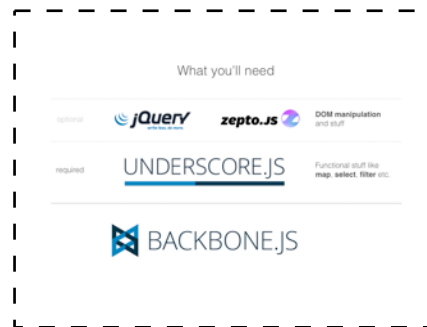

A slide template

```
<script type="text/html" id="slide-template">  
  <h2><%= title %></h2>  
  <p><%= content %></p>  
</script>
```
